

DIAMASHINE®

Maintenance Diamond Impregnated Pads

Diamashine diamond maintenance floor pads are the chemical free* environmentally friendly solution to keeping polished concrete, marble, granite, and terrazzo floors looking new. They are available in 3 steps for cleaning, maintaining and restoring the shine on concrete, terrazzo and natural stone floors.

DIAMASHINE® #3

- Use daily on high traffic floors to clean and lightly polish the floor simultaneously. Weekly use on lower traffic floors may be sufficient for keeping the floor looking shiny and new
- Cleans more effectively without soap or detergent than traditional floor pads clean with the use of chemicals
- Two 17" pads can last 500,000 SF or more on well refined floors

DIAMASHINE® #2

- More aggressive than #3 Diamashine pads for restoring lost luster
- Use occasionally on high traffic floors in conjunction with #3 Diamashine pads to sustain peak shine
- Helps restore shine on floors not receiving regular cleaning

DIAMASHINE® #1

- Extra aggressive restoration pad can often restore the shine to dull floors not yet in need of full polishing. Make four to six passes before progressing to the #2 Diamashine pad
- High concentration of quality diamonds enables #1 Diamashine X pad to renew the shine on floors where other pads fail

Maintenance DIPs (Diamond Impregnated Pads)
